

TestNTag® iPhone Data Capture Solution

What is TestNTag®?

TestNTag® is an iPhone/iPod barcode based electronic data capture system. TestNTag® has been specifically designed for the Electrical Testing OHS Compliance Industry.

Benefits of TestNTag®

Efficiency TestNTag® is up to three times quicker than performing manual handwritten records. The initial capture of data is speedier as the information is selected from preloaded drop down menus using a touch screen on the iPhone, scanning the barcode on the appliance with a Bluetooth barcode scanner or the built-in camera. Unlike transcribing handwritten records into a digital format, the transfer from the iPhone back to the desktop only takes seconds. This increases data integrity, as there is no room for mistakes as well as cutting down in administration time.

Multiple Sites

The system can handle multiple sites or customers. This is useful for those who are performing a service of testing and tagging for more than just one customer or more than just one site.

Multiple Users

The basic system is for iPhone/iPod, the system

can be upgraded to include multiple portable units. This means that you can have more than one technician at one site, or even multiple technicians at multiple sites.

Non-Tester Specific

TestNTag® does not require you to use a specific Portable Appliance Tester. This means that you can choose a tester that is specifically suited to your application and budget instead of being locked into a specific tester or integrated testing unit.

Data Administration

The system comes in two parts; The first part is the iPhone/iPod to capture the data. The second part of the system, TestNTag® is transferred back to a computer and used as a desktop application. TestNTag® then facilitates the accurate administration of the captured data, editing, searching, removing duplicates and printing off log books at the click of a button.
